

Project Work Fall 2013: Requirements

All of you must address the items below in your Requirements Document. Some of these are subjective -- make them as objective as possible. Limit yourself to BlueJ's code dealing with plain text and Java editing, and plugin support.

Team:

| | Max | |
|---|-----|-----|
| There was no Requirements Document written for BlueJ by its authors. Pretending that BlueJ implementation does not exist yet, write this document addressing existing features and the items discussed in this section. | 40 | |
| Describe an improved GUI look-and-feel (e.g., to match Eclipse). | 20 | |
| Develop a new and useful feature/ improvement/ plugin. It is expected that different teams will propose different things. | 20 | |
| Describe code maintainability expectations. | 20 | |
| Describe the expectations of "By the end of Testing Phase" (see Testing section). | 20 | |
| Journals of your team members. | 30 | |
| Tech Report (TR) style. | 10 | |
| Separate critiques by your team members of the Requirements documents submitted by another group. [To be done later.] | 15 | TBD |
| Total | 175 | |

The numbers in Max column are the maximum possible score for the item in the row. They may add up to > 100. The Score Earned per each of the six phases of projects is computed as follows: (Sum of the Item Scores Earned)/(Sum of the Item Max Scores)*100.
